

— AI-NATIVE PLATFORM FOR BEHAVIORAL HEALTH

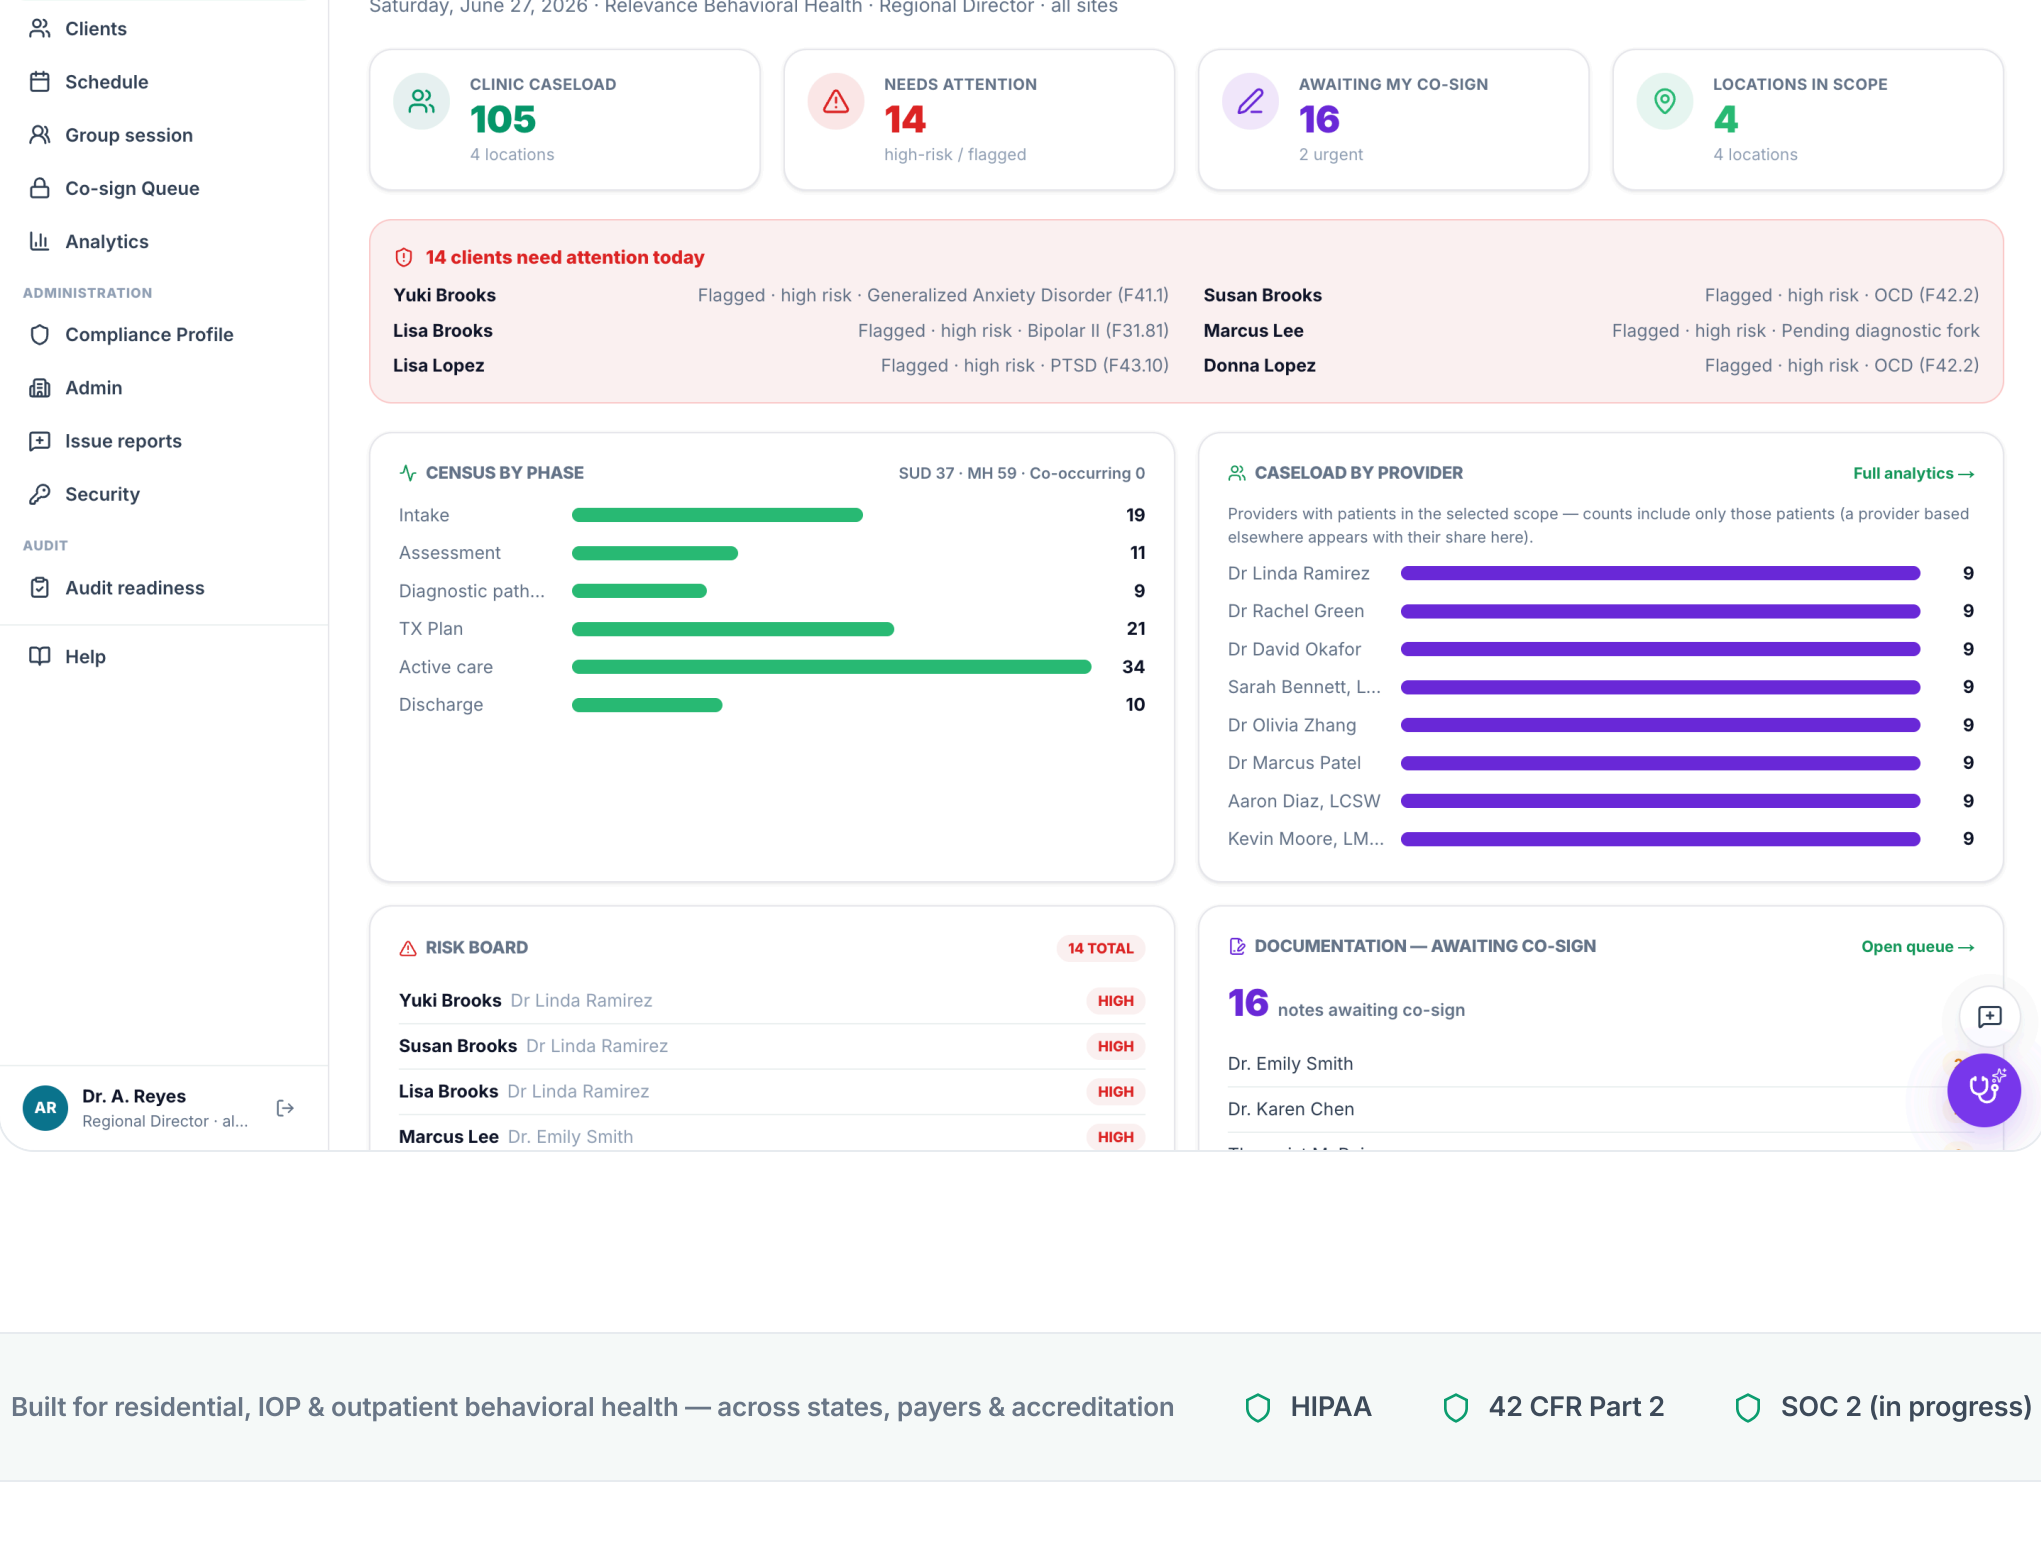

Every chart — paid and audit-ready.

KuraHealth is the compliance brain for behavioral health: AI that documents the visit, codes it, and keeps every chart survey-ready — so your clinicians can focus on what matters, care. The clinician is always the author of record.

See how it works

- HIPAA
- 42 CFR Part 2
- Audited PHI access
- Abstain-by-default AI

Built for residential, IOP & outpatient behavioral health — across states, payers & accreditation

HIPAA

42 CFR Part 2

SOC 2 (in progress)

— THE PROBLEM

Two things can close a behavioral-health clinic: burnout, and a failed audit.

Clinicians lose hours a day to documentation while payers and accreditors demand ever more rigor. One denied claim trend or a failed state survey can shut a facility down — and the paperwork that prevents it is the same paperwork burning out your team.

137M

Americans live in a mental-health professional shortage area — demand far outstrips capacity.

93%

of behavioral-health workers report burnout — documentation is a top reason clinicians leave.

#1

cause of lost revenue & audit exposure: incomplete, inconsistent, un-coded charts.

— ONE PLATFORM

Capture → document → code → comply → get paid.

Not a scribe bolted onto an EHR. One connected system where every step feeds the next — and the clinical record stays defensible the whole way through.

01

Capture

Record, dictate, type, or document a call — in person or telehealth.

02

Document

A structured draft, every figure verified against the record — you sign.

03

Code

ICD-10 suggested from the signed chart, grounded and sourced.

04

Comply

Per-facility rules for state, payer, accreditation & Part 2.

05

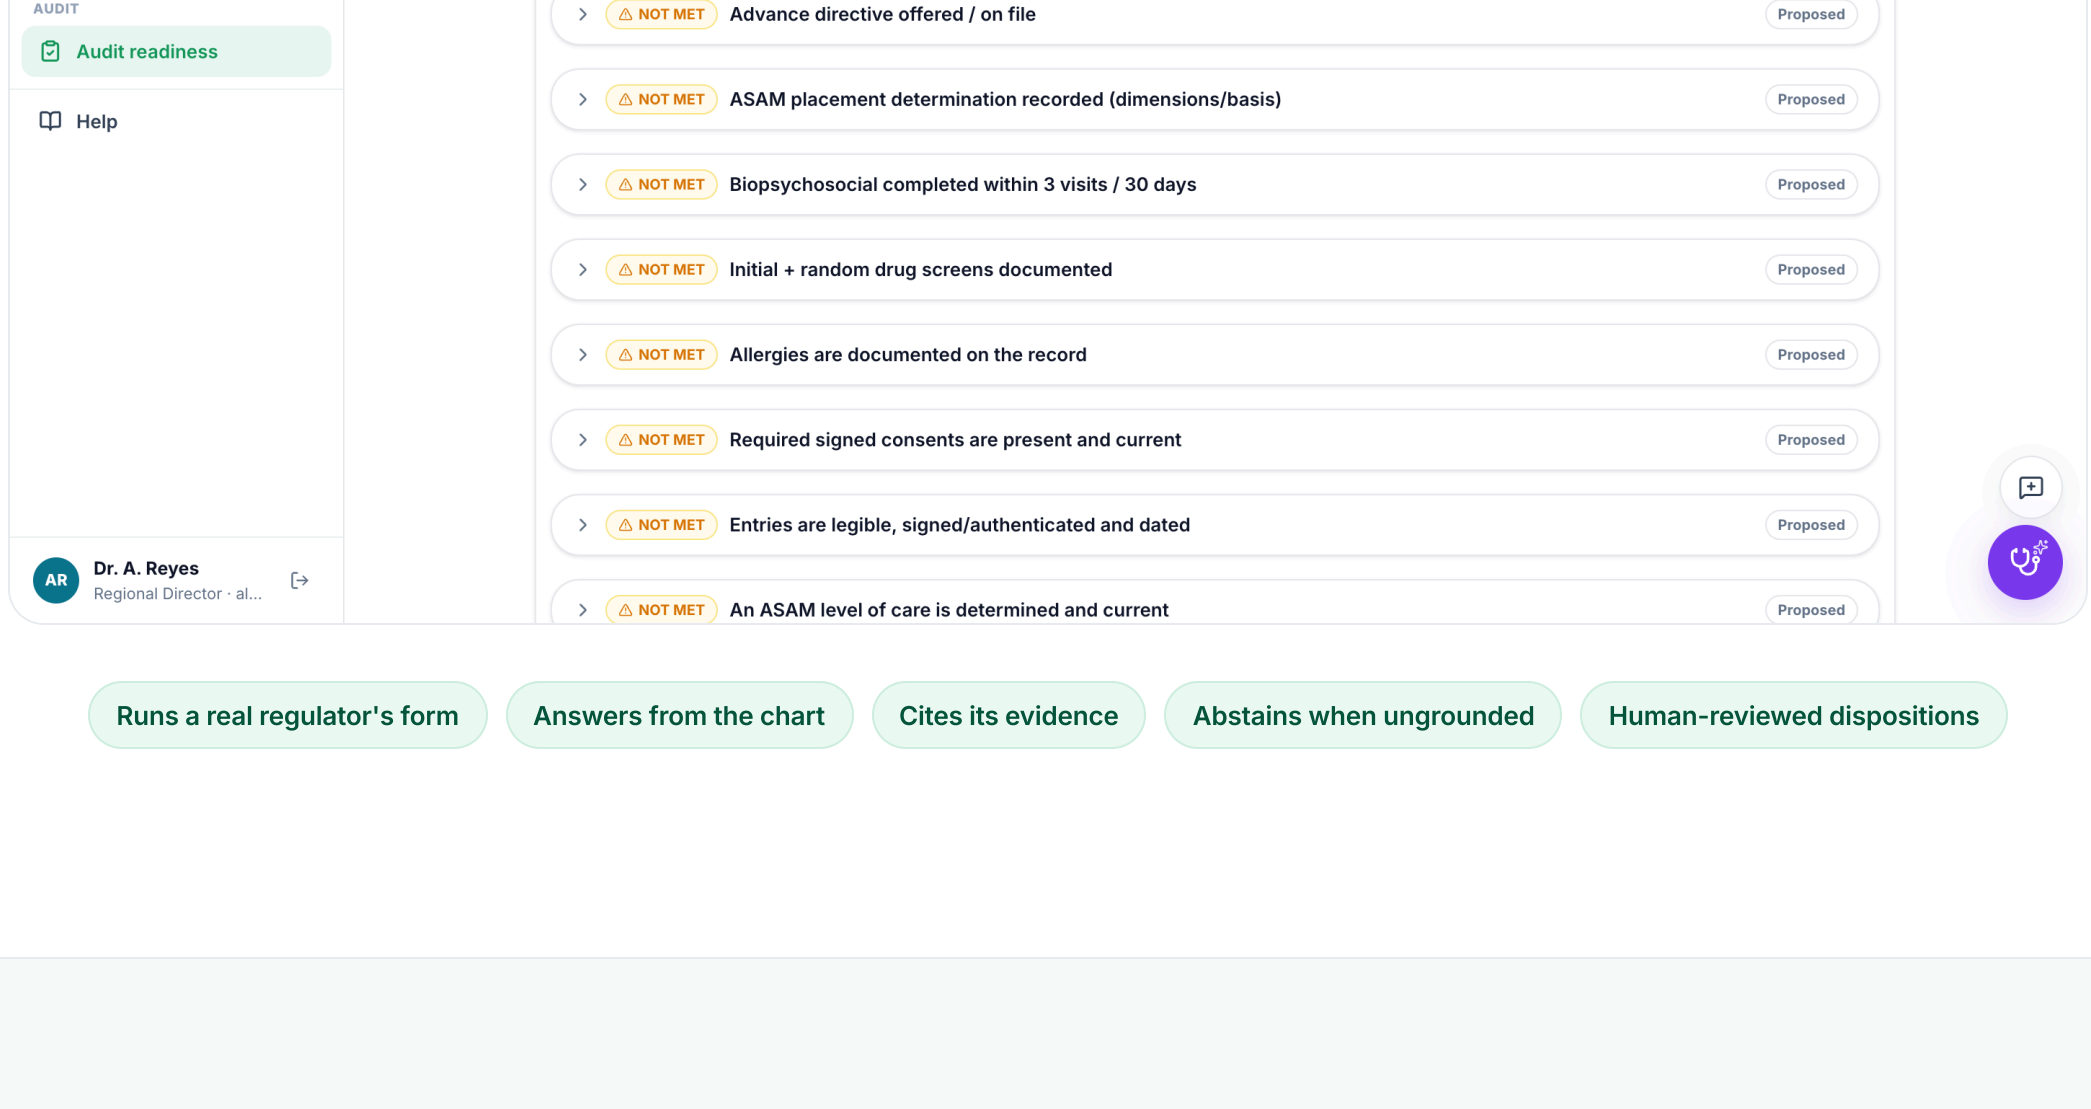

Get paid

Every chart complete, billable, and survey-ready.

— THE MOAT · AGENTIC AUDITOR

It runs the survey before the surveyor does.

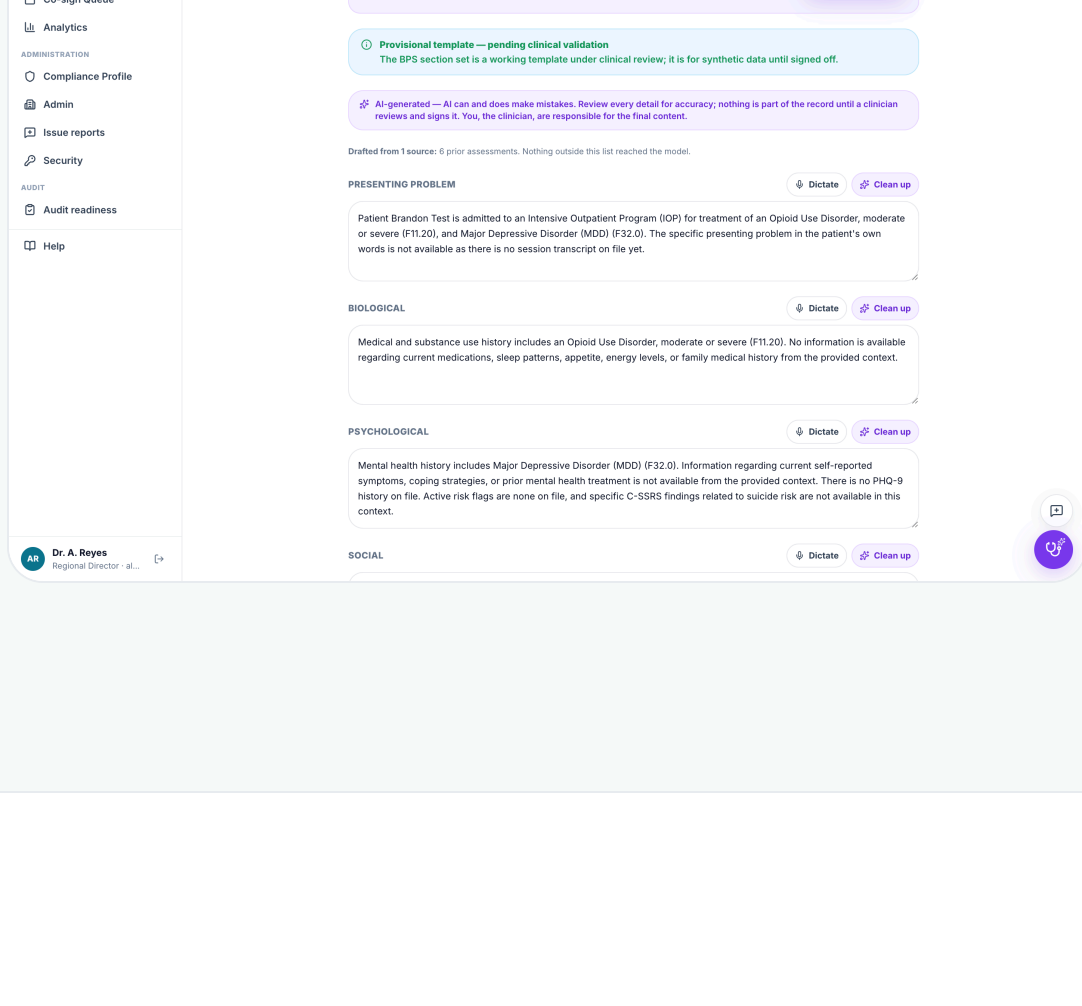

Point KuraHealth at a regulator's actual survey form. It reads each requirement, runs it against a sample of your charts, and answers question-by-question from the record — citing its evidence, and abstaining when it can't ground the answer. No confident-but-wrong "you'll pass."

Finish the note before you leave the room.

Record the session, dictate after, type live, or document a phone call — the AI drafts a structured note in your format. The clinician's time shifts from *writing* to *reviewing*.

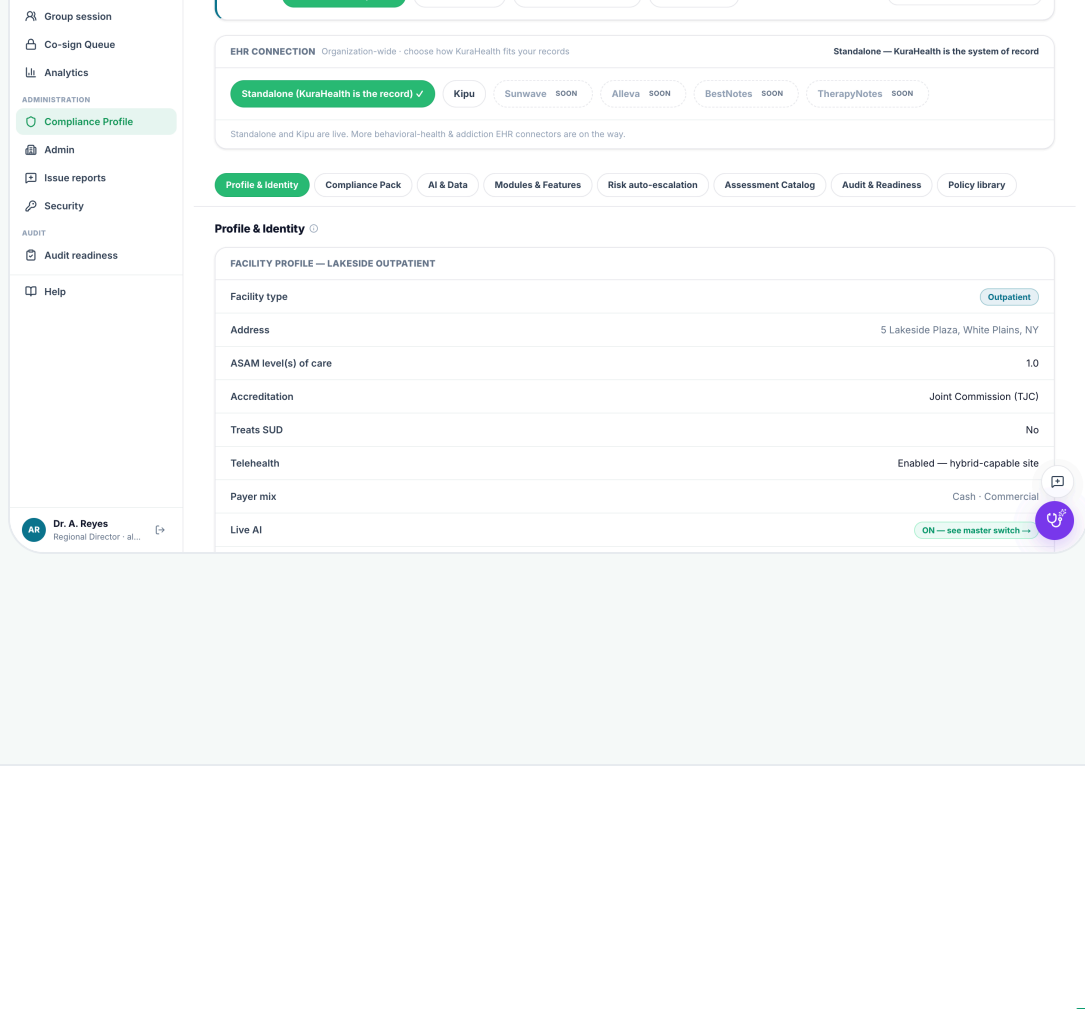

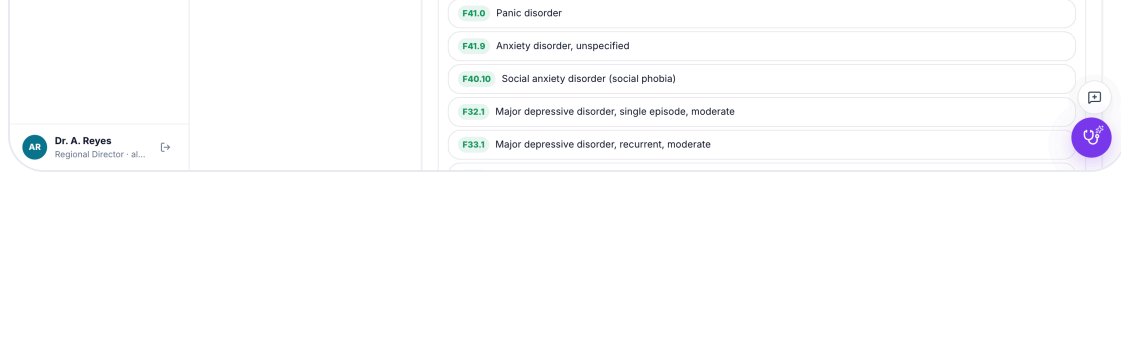

- ✓ Every number it cites is verified against the record — nothing invented.
- ✓ A "Drafted from N sources" badge shows exactly what it read.
- ✓ Nothing enters the chart until a licensed clinician reviews and signs.

— REVENUE INTEGRITY

Every chart billable. Every chart defensible.

A survey-ready check flags any open chart missing a coded diagnosis, coverage, a risk screen, or required demographics — and AI suggests the ICD-10 from the signed chart, grounded and yours to confirm. You can't bill what isn't coded; you can't pass a survey on a chart with holes.

— THE ARCHITECTURE

One product that behaves differently at every facility.

State, payer mix, accreditation, 42 CFR Part 2, telehealth, co-signature — encoded as **versioned, effective-dated data**, not hard-coded. An operator with 100 clinics can change a rule for one site, one state, or the whole org without touching the rest.

Rules-as-data

Effective-dated

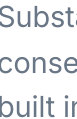

Per-facility

Compliance Packs by state

— TRUST

Built for real PHI, from day one.

The part nobody fakes: a system that can prove exactly what it did, and an AI that refuses to guess.

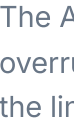

Append-only audit trail

Every action — who, what, when, why — on the patient's record. Voided, never silently deleted.

Abstain-by-default AI

0 fabrication by design. Every figure is computed in code; the AI abstains when it can't ground an answer.

Encryption & access control

SSN encrypted at rest, masked + audited reveal, idle auto-logout, role-scoped multi-tenant isolation.

42 CFR Part 2 & consent

Substance-use confidentiality, signable consents, ROI, and accounting-of-disclosures built in.

Tested & reviewed

~1,300 automated tests and an adversarial threat-model rubric on every change.

Author of record

The AI accelerates the clinician; it never overrules them. A licensed signature is always the line.

Less time documenting. More time treating. And you never lie awake before a survey.

See KuraHealth run your survey, draft your notes, and surface the revenue you're leaving on the table — on your own charts.
